- 13. A tool for surveying the work of the beneficiary of the organization's fund project. To support the victims of the Iraqi war

.1 Introduction

It's a peer organization monitoring and evaluation framework for youth development in any program to show methods, tools, activity data collection, data analysis and reporting processes. The main purposes of monitoring and evaluation of a Musharaka program include supporting effective program management at all levels, ensuring and encouraging outcomes internal and external reporting requirements, measuring, participatory learning and reflection (reflection) through reliable and timely data collection, analysis and communication

Enhancing program performance: The Peer Organization Management Information for Youth Development are required to review progress and assess performance by comparing actual goals and achievements. Making timely decisions and adapting program interventions to change contexts and address implementation constraints requires timely and reliable information.

Reporting and Accountability: Meet the requirements for regular reporting to provide feedback (feedback) within program management and external stakeholders on the timing, relevance, efficiency, and effectiveness of interventions.

Measuring outcomes and enhancing learning: This involves using qualitative and quantitative data to determine whether and why interventions are producing desired outcomes within a given context, including what worked and what didn't.

The system primarily tracks outcome and outcome indicators, focusing on organizational capacity development and program outcomes. Program outcome indicators are measured periodically while program outputs are routinely monitored such as the number of people who attended events (eg CSO hubs and fairs) and training on an ongoing basis. Both indicators help assess progress and review and improve activities.

.2 Monitoring and evaluation methods

The Musharakah program uses different methods of monitoring and evaluation depending on the type of activities and indicators being measured. It seeks to obtain data from various sources using project log/MIS, assessment of exercises participatory methods and feedback surveys (comments).

2.1 Keeping records of activities

Data will be conducted for a large class of activities such as training, meeting and grants on an ongoing basis when notable activities have been completed. The data will be entered regularly into a database system to process and generate information to the practical extent and disaggregated by important variables of interest such as gender, gender, age, location, minority status, etc.

2.2 Evaluate the exercises

Since training includes an important component of Musharaka program activities, the monitoring and evaluation system collects data on the number of participants according to the type of training as well as measures knowledge retention through training beneficiaries surveys. Training evaluation focuses on the trainee's reaction and learning outcomes. Certain survey tools will be developed based on the training agendas for the exercises provided under the programme.

the training course: the place of s reaction to' Trainee's reaction: This is the trainee the training, the facilitator, the content and the importance of the course. This is done at the end of the training using closed questions (with short answers or answers with yes or no) with classification or open questions that have no specific answers.

- Closed Question Example: Rating Rating (Example of a reaction to a 5-point (rating
- Examples of open-ended questions: eg what was most useful, what could have been improved?

Learning: This is based on covered training modules and training outcomes to improve training knowledge on a specific topic. The indicator that is measured is the percentage increase in the trainees' test score for post-training as compared to the pre-training test score. The same questions are administered immediately before and after training. The test questions will have the following possible response (response) formats

- Yes or no
- Multiple responses
- Fill the void
- Matching
- Open-ended questions (preferably a few)

The test results before and after the training are compared face to face with the training topics covered which will serve as a basis for determining the contribution of the training and preparing a report on the results

Feedback 2.3 Surveys (Feedback)

An activity/event feedback survey is conducted to assess the reaction and opinion of the participating beneficiaries within the targeted CSOs or local communities on the coverage and benefits of peer-supported activities for youth development . Surveys are usually conducted at the end of an event with representative (typical) samples from a subset of the population of interest or coverage of the total population by program subcomponents depending on the size of the population reached. At least 30 participating beneficiaries will be interviewed for each feedback survey with random selection to the extent feasible. If participants are less than 30, interviews will be .conducted with all participants

Examples of the survey questionnaire include opinion polls/interviews with those who attended the exhibition and the center of civil society organizations, and surveys of feedback from beneficiaries of the Peer Organization Program for Youth

Development and the Ministry of Youth and Sports . Specific questionnaires will .be designed in collaboration with responsible program staff, monitoring and evaluation

2.4 Participatory Methods

Participatory methods assist in assessing the perspectives and perceptions of a small group of informed stakeholders including citizens, CSO members and government representatives, and will be conducted by PPP staff and implementing partner CSOs at different levels as needed and according to monitoring and reporting schedules.

Methods will include interviews with key respondents, direct observation, focus group discussions (target group), and case studies.

Interviews with key respondents: Interviews will be conducted with key respondents ,who are well-informed to provide information on the relevance, appropriateness perceptions and reactions to the various interventions of the organization's programmes. Potential sources of information include community leaders, religious .leaders, elders, members of civil society organizations, etc

Focus group discussions (target group): This includes gathering information and opinions from a small group of individuals using the focus group discussion guide (target group). A group can be homogeneous or heterogeneous depending on the subject and objective of the evaluation.

Direct observation: On-site observation of the participation program interventions such as that the meetings and events of civil society organizations have direct information on the quantity and quality of the interventions. This will be done using appropriate note lists.

Case study: This involves analyzing a qualitative case to provide an account of how the organization's program interventions affect the individuals, groups, communities or organizations involved.

The .3 main tools of monitoring and evaluation

The primary tools for monitoring and evaluation in collecting indicators for monitoring the performance of the organization's programs at the activity level will be follow-up forms (signing of activity sheets and records), survey questionnaires, semi-structured interview guides (focus group discussions and key respondents) and observation lists. Activity logs are designed based on the type of activities and provide disaggregated data whenever possible by gender, age, location, etc. The form and content of tools, questionnaires will depend on the topics the activities are covering (eg CSO fairs/hub activities, trainings).

3.1 Monitoring and evaluation tools for the creation of a participation program

The following two tools will be used primarily in monitoring the events organization's programmes through direct observation and feedback surveys (feedback).

The activity/event participant login sheet: It is to provide information about the background of the participants in the activity/event organized by the organization's programs and level of attendance. If the size of the activity/event is reasonable (leadable management), attendees will log in using this sheet. This sheet includes the participant's name, age, gender, location and affiliation.

Activity/Event Participant Summary Form: This form is used to summarize the number of participants in all activities organized by the organization's programs It provides basic information on the number of attendees by gender, location (governorate / district / sub-district) and affiliation.

Meetings/Discussions Follow-up Form: It is for following up and preparing reports on the meeting/event organized by the organization's programs and partners, and it provides the number of participants by type of organization and gender as well as the agendas discussed, resolutions passed and any noteworthy observations.

Activity/Event Feedback Survey Tool: The feedback survey questionnaire collects information about participants' evaluation of the event/organised activity, which will be determined on the basis of the activity held and the respondent's background such as gender, age and affiliation. In addition to assessing the perception, it will also serve as feedback in the organization of similar events in the future.

3.2 Monitoring and evaluation tools for training

The following three tools will be used to monitor and report on training activities related to the organization's programmes

Training participant's signature sheet: It is to provide basic information about the participants' background in training courses and level of attendance. It records the names of the participants, the organization they represent, gender, age, location and address.

Training evaluation form: It is to seek feedback from the trainees' attendance about the training, the importance of the content and the performance of the facilitator in providing training.

Training participants summary form: It is to summarize the number of participants invited and attending the training courses organized by the organization's programs.

3.3 Monitoring and Evaluation Tools for the FAO Fund to Support Iraqi War Victims (illustrative example)

OIC Victims of War Fund project during implementation and ultimately for evaluation.

Population profile of the organization 's fund to support Iraqi war victims: A set of personal data will be made on the communities that implement the projects of the organization fund to support Iraqi war victims to identify needs and prepare detailed project proposals and basic information. Community profiles include specific demographic and project data. The profile presents the size of the target groups and serves as the basis for determining the beneficiaries of the project.

Basic Data for Individual/Community Equip Projects for the OIC Fund to Support Iraqi War Victims: This is to lay the foundation for each community or individual outfitting project identified to support funding from the OIC Fund to Support Iraqi War Victims. The tool is used to record the currently available (base), if any, and additional materials required to determine the level of need and support from the organization's fund to support Iraqi war victims.

Monitoring an individual/community equipping project for the organization's fund to support Iraqi war victims: These are completed at the time of project processing and provide information if the materials match the bills of quantities and meet the expectations of the beneficiaries.

Monitoring a community infrastructure project for the organization 's fund to support Iraqi war victims: In the event that the community decides to build an infrastructure/rehabilitation project, the staff of the Peer Organization for Youth Development and the implementing partner NGOs, in cooperation with the relevant authorities in the community and the government, conduct field visits to monitor the progress of work and ensure quality and the quantity of implementation and matching the schedule of quantities. In such cases project monitoring is usually conducted on an ongoing basis with more formal M&E reports generated at 30, 70 and 100% work completion stages.

Assessment of an Infrastructure Project Assessment of the Organization Fund to Support Iraqi War Victims: Within 60 to 90 days of completion of a specific community project, the staff of Peer Organization for Youth Development and implementing partner NGOs with stakeholders conduct an assessment visit to assess the use and maintenance of the project facilities as well as collect feedback (Feedback) from members of the beneficiary community using participatory assessment tools (direct observation, interviews with key respondents, focus group (discussions).

Beneficiary Business Survey Tool of the Organization Fund Project to Support Iraqi War Victims: About six months after submitting the small grant to the individual business or beneficiary who If the business is running, a feedback survey will be conducted to assess success and benefits in terms of income and improvement in the overall standard of living including whether the business is still operating, the level of income generated, job opportunities generated and any follow-up support that may be required. The evaluation questionnaire will be completed with all initially qualified grant recipients by the monitoring and evaluation staff of the organization's programmes and gradually by staff of partner NGOs implementing the fund Organization to support Iraqi war victims organizations.

.4 Data analysis and reporting

The M&E data collection for the participation program from different sources according to the schedules will be conducted primarily by the M&E staff of the Victim Support Fund Program with responsible organization staff and civil society organizations. The data will be entered into the appropriate program such as Excel, Access or Statistical Package for the Social Sciences Program SPSS Depending on the volume of data and the level of analysis required, which will be guided by program management and reporting needs. It will be ensured that data is disaggregated by relevant variables such as gender, age and geographic location, to determine the access and impact of participating program interventions on different groups. The information will be summarized and presented in usable forms including narrations, tables and graphs as appropriate.

Annex: Monitoring and Evaluation Tools for Participation Program

					Project Efficiency
					The effectiveness of the project in achieving its objectives
					Improving access to services
					Improving the quality of services
					Leads to the intended beneficiaries

The rating is based on the satisfaction scale (5 = excellent, 4 = very good, 3 = good, 2 = average, 1 = poor).

Fourth: Evaluation of the review team

Evaluation team review/assessment: This section is completed based on an evaluation by the various stakeholders and the analysis of the data collected during the evaluation process by the evaluation team. Focus on changes after project implementation and lessons learned. Comment on the process and present the results to the intended beneficiaries. For example, if the project has built classrooms, the results and benefits of the project and its contribution to improving access to 5 education should be explained using outcome/impact indicators (eg how many children are enrolled in school before and after the project). Refer (reference) to the selected outcome/impact indicators in the project document. The most common way to demonstrate the impact of a project is by using quotes and case studies backed by some quantitative data. However the quote must be put in context. Is the quote a true representation of this case? How were the quotes obtained? If through interviews, how many people did you interview? How many of them share the same opinion? Were ,there differing opinions? Why? Disaggregate data where appropriate and possible (gender, age disability, etc).
